

Panel Options

P100 High Pressure Laminate (HPL)

20mm thick panels finished with a straight edge finished in matching laminate giving a sharp clean appearance. Suitable for most dry areas. Veneers may also be specified.

P200 High Pressure Laminate (HPL)

20mm thick panels finished with post formed edges on the vertical for a softer aesthetic feel. Suitable for most dry areas.

P300 Compact Grade (CGL)

12mm thick high performance panelling with soft radiused edges for use in wet environments, high wear areas or those requiring high levels of hygiene and robust cleaning regimes.

P400 Glass/Laminte

4mm toughened or laminated glass wall panels provide a prestigious and luxurious ambience and can produce that wow factor which 5 star establishments need to create.

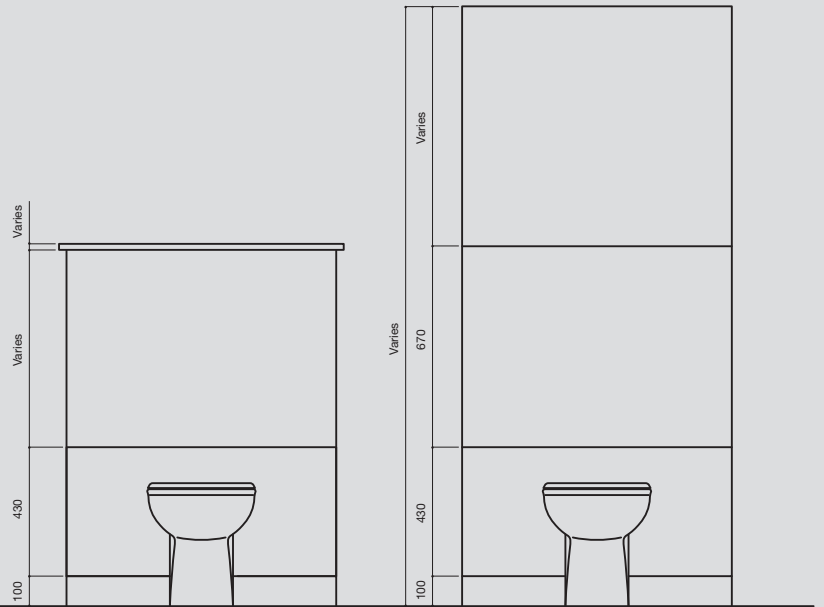

For maximum design flexibility, Petal's Advanced Panel System features a galvanised steel sub frame. A wide range of material and performance options are available and we are able to advise which combination will be best suited to your project. The Petal support team will provide detailed drawings of each panel system project ensuring trouble-free installation on-site.
